Dept.of  computer applications                   Roll.no:29

# System Overview

The main feature or idea for the project is to automate the sehion retreat center.This management system is an innovative thought to simplify the activities in sehion retreat center. This project intends to introduce more user friendly in various activities such as retreat booking,record updating maintainance and searching.

# System study

## Existing system

- The system is completely manual.
- Details are stored in files or registers.
- It is time consuming process.
- Now retreat booking is done by phone calls.
- Updation of records is a difficult process.

## Proposed system

The system is designed to fully automate the sehion retreat center through online booking services, availability of seats, intercession prayer booking. All the data is stored electronically.

- Updating  of data will be easier.
- Better performance.

# Types of users

<u>Admin:</u> Administrator is the super user and the main controller of the sehion retreat center management system. He/she controlles all the activities of the system and has complete authority over the system.

<u>Customer:</u> A customer is a person who deals with their personal details.They have privilege to book for retreat.

<u>Guest user:</u>They have only privilege to view common details about sehion retreat center.

# Functionalities

## Admin

- View the profiles of customer.
- Verify and sanction or rejection of retreat booking.
- Atmost privileges to admin.

## Customer

- Online booking.
- View retreat details.
- Register for intercession prayer.

## Guest users

- View common details about sehion retreat center.
